

SIGNALLING & CONTROL

Company for engineering " Signalling & Control" Ltd.
Branka Krsmanovića 20, 11000 Belgrade, Serbia

Quality policy

Company Signalling & Control d.o.o. Belgrade is specialized in the design and development, production, installation, testing and maintenance of railway safety signaling and electronic devices with a diagnostic system with accompanying software.

The company also has licenses for design, execution, professional supervision, technical control and technical examination and acceptance of safety signalling and telecommunication systems on the railway.

By placing product safety at the highest level, Signalling & Control provides solutions that ensure safety on railway lines and rail-road crossings.

We make our competence and many years of professional experience in the implementation of railway projects available to our clients, with a constant aspiration to make each product fully according to the prescribed safety requirements, harmonized product specifications and customer requirements.

We achieve our quality goals through:

- careful analysis of the needs and technical requirements of the client;
- providing advice for optimal selection of solutions;
- design and development of competitive devices for the needs of users;
- selection of quality components and constant control of production;
- detailed testing of products in the stages of production, connection to the system and commissioning;
- competent expert supervision and technical inspection of facilities in accordance with the law;
- striving for constant improvements, innovative solutions, improvement of our work processes and fulfillment of client requirements.
